SOUTH AFRICA SHORT OF BEANS

The 1958-59 bean crop recently harvested in the Union of South Africa was reduced and damaged by prolonged general drought throughout the growing season and untimely rains at harvest time (April). No estimate of the extent of damage is yet available, but South African traders are inquiring about the availability and prices of U.S. white beans suitable for canning.

South Africa normally produces about 875,000 bags of beans annually, of which 425,000 bags are exported--principally to the United Kingdom, Japan, Belgium, Israel, and the Federation of Rhodesia and Nyasaland.

**PHILIPPINE COPRA AND COCONUT OIL EXPORTS
DOWN ONE-THIRD FROM LAST YEAR**

Philippine exports of copra and coconut oil in January-April 1959 totaled 114,232 long tons, oil basis. This represents a decline of more than one-third from the volume shipped in the first 4 months of 1958.

Copra exports of 32,544 tons in April were the smallest in any single month since May 1953, when 32,079 tons were exported. Coconut oil shipments of 5,898 tons in April were the largest monthly shipments this year. (Detailed statistics will be published next week.)

The Philippine copra export price in mid-May was about \$267.50 per short ton, c.i.f. Pacific Coast (mid-April -- \$265, mid-March -- \$257). Local buying prices were reported at 53 to 54 pesos per 100 kilograms (\$269.25 to \$274.33 per long ton) resecada Manila and 49 to 53 pesos (\$248.93 to \$269.25) in producing areas.

DENMARK EXPORTING MORE
TOBACCO PRODUCTS

Danish exports of manufactured tobacco products gained in 1958 over 1957. All items increased except cigars, whose volume was practically unchanged. Denmark exported tobacco products to more countries in 1958 than in 1957. It is reported that one Danish manufacturer has introduced a new brand of cheroots for sale in the Common Market.

Denmark has consistently been a buyer of high-quality U.S. tobaccos.

SPAIN'S TOBACCO IMPORTS
UP LAST YEAR

Spanish imports of unmanufactured tobacco totaled 56.0 million pounds in 1958 compared with 46.7 million in 1957. Imports from the United States rose from 7.7 million in 1957 to 8.0 million in 1958. The biggest increases, however, were for Brazil and the Philippines. These countries, combined, supplied 38.2 million pounds of leaf to the Spanish market last year compared with 22.8 million in 1957. The other major supplier in 1958 was Cuba with 9.1 million pounds.

TOBACCO, UNMANUFACTURED: Spain, imports by country of origin, 1956-58

**U. S. TOBACCO EXPORTS
DROP IN MARCH**

U. S. exports of unmanufactured tobacco in March 1959 totaled 33.2 million pounds--a drop of 6.6 percent from March a year earlier. The value of March 1959 exports also was lower than in March 1958--\$23.5 million compared with \$24.5 million.

Exports of flue-cured, dark-fired Kentucky-Tennessee, Virginia fire-cured and cigar wrapper were below those of March a year ago. There were increases in Burley, Maryland, Green River, One Sucker, Black Fat, and cigar binder.

For the first 3 months of calendar 1959, exports totaled 77.7 million pounds--down about 6 percent from the 82.5 million shipped out in January-March 1958. Exports for the 9 months of fiscal year 1959 totaled 398 million pounds--about 1 percent above those for the corresponding period of fiscal 1958.

1/ Includes sun-cured.

U. S. exports of tobacco products in March 1959 were valued at \$8.3 million--up 22.1 percent from March of last year. Exports of cigarettes at 1,478 million pieces were up 6.5 percent, cigars and cheroots were up 15.9 percent. Smoking tobacco in bulk--at 1,972,000 pounds--increased 141 percent above the corresponding month a year ago.

DUTCH REDUCE CIGARETTE CONSUMPTION IN 1958

Dutch smokers smoked fewer cigarettes in 1958 than in 1957, according to recent Netherlands data. Cigarette sales, at 13,043 million pieces last year, were 3 percent below the 1957 consumption of 13,457 million. At the same time, there was an increase in sales of "cut" tobacco used for both pipe smoking and "roll-your-own" cigarettes. Sales of this product amounted to 19.6 million pounds in 1958 compared with 17.9 million pounds in 1957. Sales of cigars and cigarillos in 1958 also were larger than in 1957.

Less cigarette use last year reflects the rise in retail prices of about 5 percent made effective in March 1958. Trade representatives in the Netherlands think, however, that cigarette consumption will rise this year, and that sales of "cut" tobacco will drop.

U. S. MOHAIR EXPORTS
UP SHARPLY

Shipments of mohair and other wool-like specialty hair in January-March 1959 totaled 5.2 million pounds, clean basis, compared with 2.1 million pounds a year earlier. However, exports in the first quarter of 1958 were relatively low as a result of the textile recession in major foreign markets. Exports in the first quarter of 1959 increased sharply to the United Kingdom, the Netherlands, Belgium, and Japan.

The strong revival of foreign demand is reflected in mohair prices. The average price received by Texas growers in April 1959 was \$1.05 per pound, compared with 55 cents a year earlier.

MOHAIR 1/: U. S. exports by country of destination, clean content,

U. S. EXPORTS OF HIDES AND SKINS
DECLINE IN FIRST QUARTER 1959

U. S. exports of cattle hides and calf and kip skins all fell sharply in the first quarter of 1959 from the same period of 1958. Exports of cattle hides in January-March were down 26 percent and shipments of calf and kip skins were less than one-half those of a year earlier. These declines were caused by smaller supplies and higher prices.

Shipments of sheep and lamb skins rose sharply in the first quarter of 1959, especially to the United Kingdom.

AUSTRALIAN WOOL PRODUCTION ESTIMATE REVISED UPWARD

Australia announced on May 1 a revised wool production estimate of 1,544 million pounds, grease basis, for the 1958-59 season (July-June). This is substantially above the December estimate of 1,459 million pounds and last season's output of 1,433 million pounds. It is near the record 1,564 million pounds in 1956-57.

The increase this season is due to a more favorable growing season. Fleece weights have been considerably higher than for last season's drought-affected clip. Sheep numbers in 1959 are expected to be down slightly from a year earlier.

AUSTRALIAN BEEF SHIPMENTS TO U. S. IN APRIL

The ship *Mariposa* sailed from Australia about mid-April with 459,200 pounds of frozen beef. Destinations of the ship were Los Angeles, 237,440 pounds, and San Francisco, 221,760 pounds.

NEW ZEALAND BONELESS BEEF PRODUCTION DROPS

New Zealand's production of boneless manufacturing beef for export dropped from 62.1 million pounds during the 5 months ended March 29, 1958 to 53.2 million pounds during the same period in 1959--a reduction of 14 percent.

During 1958, New Zealand exported 182 million pounds of beef and veal to the United States, most of it boneless manufacturing beef. Exports dropped sharply during the first 2 months of 1959 and are expected to continue lower in 1959 than in 1958.

Prices received by New Zealand farmers this season for "boner" cattle dropped over 12 percent between the week ending March 7 and the week ending April 25.

IRELAND TO SHIP HORSE- MEAT TO SWEDEN

An Irish meat-packing firm in Limerick plans to make several trial shipments of horsemeat to Sweden to test the market there. The Limerick firm is the first packer to qualify for exports under a regulation issued in 1957 permitting shipments of horsemeat abroad (see Foreign Crops and Markets, December 1, 1959). The shipments it plans will be its first.

Sweden, the largest importer of U. S. horsemeat, took 2.2 million pounds, valued at \$703,753 from the United States during 1958.

AUSTRALIAN HIDE PRICES AND EXPORTS RISE

Australian cattle hide prices have risen sharply in recent weeks along with the increases in Argentina and the United States--the 2 major exporters. Industry spokesmen attribute the rise to a present hide shortage caused by a drop in U.S. and Argentine slaughter (see Foreign Crops and Markets, May 4, 1959).

Prices of Australian light hides in early April ranged up to 33 cents per pound, compared with 19 cents a year earlier. The price of heavy hides in the same periods was 23 and 18 cents, respectively.

Australian exports of hides have also increased sharply from a year earlier. During the July-February period, exports of cattle hides increased from 34.1 million pounds in 1957-58 to 45.2 million pounds in 1958-59. Shipments of yearling (kip) skins increased from 1.7 to 5.6 million pounds and calf skins rose from 2.6 to 3.5 million pounds.

The United States is taking substantial quantities of Australian hides for the first time since World War II. Exports of cattle hides to the United States in July-February 1958-59 totaled 5.4 million pounds. Small quantities of yearling and calf skins also went to the United States.

CANADIAN CANNED FRUIT PACK SLIGHTLY SMALLER IN 1958

The 1958 Canadian canned fruit pack for 9 selected items totaled 3,189,000 cases, basis 24 No. 2 $\frac{1}{2}$ cans, and was slightly smaller than the 3,304,300-case output of a year earlier. The number of cases of apple products, plums, cherries, and raspberries increased; canned apricot and strawberry production declined sharply. According to the Canadian Department of Trade and Commerce, 1957 and 1958 production of the canned fruit items indicated below was:

Item	1957 pack	1958 pack 1/
	<u>1,000 cases</u>	<u>1,000 cases</u>
Apples, solid pack (incl. crabapples).....	1/ 333.2	307.2

Pears.....	592.8	599.5
Plums.....	187.7	248.5
Raspberries.....	72.8	82.0
Strawberries.....	74.2	46.8
Total.....	3,304.3	3,189.2

1/ Preliminary

MEXICAN STRAWBERRY CROP
DAMAGED BY RAINS

Unseasonal rains damaged the 1959 strawberry crop during the height of the harvest season. A preliminary trade estimate for the 1959 crop is 11,000 short tons. Acreage and production are as follows:

Year	Acreage	Production
	Acres	Short tons
1956.....	6,400	9,900
1957.....	8,200	13,500
1958.....	7,400	10,900
1959.....	6,900	11,000

Early prospects for the 1959 crop were good, but because of the unseasonal rains few berries were delivered to processors during April. If weather conditions are normal or better during May and June, the production forecast may be attained.

Exports of frozen berries to the United States and Canada are as follows:

Year	United States	Canada
	1,000 pounds	1,000 pounds
1956.....	11,250	665
1957.....	13,709	660
1958.....	14,367	1,103

Exports for the first 3 months of 1959 totaled only 6 million pounds. Prices for best quality frozen berries f.o.b. Laredo, Texas, are $16\frac{1}{2}$ to $17\frac{1}{2}$ U. S. cents per pound.

In 1958 almost one-third of the strawberries were marketed fresh or in products within Mexico.

MEXICAN VEGETABLE
SHIPMENTS LARGE

A total of 54 million pounds of fresh vegetables from Mexico crossed the border at Nogales, Arizona, from April 1 through 15. A few of the shipments may move to Canadian markets.

Tomatoes, watermelons, peppers, and cantaloups accounted for nearly 80 percent of the tonnage, with tomatoes amounting to 39 million pounds. Onions crossing totaled a million pounds. Other vegetables, in order of importance, were corn, snap beans, cucumbers, and eggplant. They totaled over 100,000 pounds, while squash, garlic, okra, peas, and blackeyed peas were below 50,000 pounds.

**TURKEY INCREASES SHELLLED
FILBERT EXPORTS**

In the 6-month period beginning September 1958, Turkish shelled filbert exports amounted to 27,035 short tons, compared with 23,644 tons in the same period a year earlier. At an estimated 120,000 short tons, unshelled, the 1958 Turkish filbert harvest was about 50 percent larger than the 81,000 tons produced in 1957.

West Germany doubled its imports of Turkish shelled filberts during the first 6 months of the 1958-59 marketing season, while the United States and the United Kingdom takings declined very sharply.

Turkish exports of in-shell filberts consisted solely of 110 tons to Czechoslovakia during 1957-58; in the first 6 months of 1958-59 in-shell exports increased to 547 tons and were as follows: East Germany 221, Czechoslovakia 209, Norway 102, other 15.

FILBERTS, SHELLLED: Turkey, exports by destination, September-August 1957-58, and September-February 1957-58 and 1958-59

Destination	Sept.-Aug.	September-February	
	1957-58	1957-58	1958-59

1/ Includes 2,094 tons to Israel and 1,538 to Italy.

2/ Includes 551 tons to Israel and 269 tons to Italy.

MEXICAN RICE CROP SETS ANOTHER
RECORD: CONSUMPTION UP

Mexico's record 1958 rice crop is now estimated at 555 million pounds of rough rice, compared with the previous largest harvest of 528.9 million pounds in 1957. Production in 1950-54 averaged 370 million pounds annually.

Both rice acreage and output have also increased every year since 1954. Acreage rose from 222,000 acres in that year to 310,000 acres in 1958. Per-acre yields also have been higher, due largely to the use of irrigation and modern methods of cultivation on most of the new acreage.

RICE: Mexican acreage, yield per acre, and production,
averages 1940-54, annual 1955-58

Year	Acreage	Yield per acre	Production		
			Rough	Milled	equivalent 1/
			Million pounds	Million pounds	
Average:	1,000 acres	Pounds			
1940-44.....	155	1,547	239.8	156

1950-54.....	235	1,574	369.9	240	
1955.....	236	1,959	462.4	301	
1956.....	285	1,818	518.2	337	
1957.....	290	1,824	528.9	344	
1958 2/.....	310	1,790	555.0	361	

1/ Converted at 65 percent. 2/ Foreign Agriculture Service estimate.

Compiled from official sources, except as noted.

The outlook for 1959 is for a still larger production if sufficient credit is available at planting time. A larger area is expected to be planted in the irrigated districts of Veracruz state as well as in Tabasco. It is now believed, however, that the large increase in rice acreage planned for Tabasco will not materialize (see Foreign Crops and Markets, December 15, 1958). The increase there is now expected to be around 12,000 acres rather than the 123,000 acres originally planned.

Rice supplies during 1958 allowed for an increase in domestic consumption and permitted exports of 24 million pounds of rough rice (15 million pounds milled basis). Consumption in 1959 is forecast at 550 million pounds of rough rice, a 4-percent gain over the 1958 level. Because of increased consumption, exports in 1959 are expected to decline significantly despite good supplies from the 1958 crop.

The January wholesale price of milled rice in Mexico City rose to a record \$8.39 per 100 pounds, but declined in February and March as supplies from the new crop began to reach the markets. The average price in the first quarter of 1959 was \$7.52 per 100 pounds compared with \$7.70 per 100 pounds in the first quarter of 1958.

BURMESE RICE SALES SLOW

Less than 500,000 metric tons of Burma's 1958-59 rice crop was sold by late April. Buyers were reluctant to pay the prices asked, and there was an early-season delay in seeking markets.

The amount of rice and rice products that Burma will actually export during 1959 is now estimated at 1.5 million tons, about the same as exports of 1,492,000 tons in 1958. From 2 to 2.4 million tons probably are available for export. The government has announced an export availability of 1.81 million tons.

Burma's 1958-59 rice crop is now estimated at 16,800 million pounds of rough rice (7.5 million tons). It is too early to forecast the size of the 1959-60 crop. If weather is satisfactory--weather is by far the most important factor--Burma should have another large crop. Acreage will continue to increase. Year-end stocks of rice and paddy should be very large. Paddy stocks on January 1, 1959, were greater than expected earlier.

As a means of increasing rice exports, the State Agricultural Marketing Board (SAMB) in March 1959 appointed agents to sell rice in all world areas on a commission basis. Local firms appointed were the East Asiatic Co., Ltd., Louis Dreyfus & Co., Ltd., and Steel Bros. & Co., Ltd., all of Rangoon. In addition, 5 foreign firms were appointed to sell rice to Asia, the Middle East, Europe, Africa, and South and Central America. Burma will still handle the large government-to-government sales in those countries that do not permit private imports, such as India.

Because of the slowness of sales thus far in 1959, Burma will probably barter more rice this year. So far, suggested SAMB barter negotiations are as follows: 100,000 long tons with France--mainly for the French African possessions; 50,000 tons with the U.S.S.R.; 30,000 tons with Czechoslovakia; and 30,000 tons with Yugoslavia.

Rice exports in January and February 1959 totaled 144,300 tons, compared with 147,700 tons exported in the same months of 1958. Major destinations were Indonesia and Malaya and Singapore, but smaller amounts to a number of countries made up a large part of the exports (see table, page 14).

Exports of milled rice in 1958, excluding rice products, amounted to 1,412,000 tons, 340,000 tons less than in 1957. In addition, 80,525 tons of rice bran were exported: 45,691 to the United Kingdom; 34,135 to Malaya; 606 to Ceylon; and 93 to Japan.

CHILE MAY IMPORT BEANS

Recent heavy storms and cold, wet weather have reduced Chile's bean crop. Although no estimates of the extent of damage are available, there are indications that Chile may be importing beans this year to supply the domestic market. Chile usually exports around 700,000 bags a year.

NORWAY PRODUCES LESS MARGARINE
IN 1958; USES MORE

Norway's margarine output was down slightly in 1958, but consumption was up more than 2 percent from 1957. Exports dropped sharply because increased consumption and decreased output reduced exportable supplies. Based on a population estimate of 3.5 million, per capita consumption of margarine in 1958 was roughly 53 pounds.

MARGARINE: Norway, estimated supply and distribution, 1956-58

Roughly one-third of the oils used in margarine continued to be vegetable oils, and two-thirds marine oils; but use of coconut oil declined almost 10 percent because of high prices following a world shortage of copra. Hardened peanut oil was substituted for some of the coconut oil.

Limited supplies of coconut oil and marine oils in 1959 will probably increase the use of other oils this year. Although domestic production of marine oils this year is expected to approximate that in 1958, stocks were cut down last year to maintain exports, and it seems unlikely that exports can be reduced very much this year in view of sales already made and commitments through trade agreements. Use of vegetable and marine oils in margarine, shortening, and related products for the past 3 years is officially reported as follows:

NEW ZEALAND AND WEST GERMANY SIGN TRADE AGREEMENT

A 2-year trade agreement between New Zealand and West Germany, signed April 20, 1959, places West German imports of certain New Zealand agricultural products on a quota basis.

The agreement provides for imports of specified amounts of beef, lamb, mutton, canned meat, dehydrated milk, apples, pears, and canned and frozen vegetables from April 1, 1959, to March 31, 1960.

In 1958 West German agricultural imports from New Zealand totaled \$25.9 million. Of this, \$17.3 million was wool, \$3.9 million hides and skins, and \$3.0 million other livestock products. Providing New Zealand can tender successfully on the listed commodities, the value of the new trade agreement will be around \$7 million annually, not including wool and hides and skins--trade in which is already liberalized.

It was agreed that consultations on revision of quotas may be proposed by either country, especially if disturbances in German-New Zealand trade occur as a result of European economic integration.

CANADIAN WHEAT AND FLOUR EXPORTS CONTINUE LOW

Canadian wheat and flour exports during the first 9 months (July-March) of 1958-59 totaled 209 million bushels, about 3 percent below those in the comparable period a year earlier. Wheat exports accounted for a drop of 5.9 million bushels and flour for 1.1 million bushels.

Exports of wheat to India were down approximately 50 percent, but they are expected to pick up in the next few months as a result of Canada's aid program. The U.S.S.R. imported no Canadian wheat in July-March 1958-59, compared with 7 million bushels a year earlier. However, trade circles report that the Soviet Union is negotiating for 10 or 15 million bushels of Canadian wheat. Arrangements are said to be nearer completion than wheat and barley negotiations with Poland, which are moving slowly.

Canada's exports to its major wheat markets (the United Kingdom, Japan, and West Germany) were above those in the 9-month period a year earlier. The Union of South Africa, which took no Canadian wheat in 1957-58, imported 4 million bushels in the first 9 months of 1958-59.

The United Kingdom continued to be the main outlet for Canadian flour, taking slightly more than a year earlier. Exports of flour to Ceylon were up somewhat. Recent establishment of flour mills in the Philippines and Venezuela has reduced imports of Canadian flour by those countries.

Wheat and flour exports during the first 9 months (August-April) of the 1958-59 Canadian marketing year are expected to be approximately 4 million bushels below the 219 million bushels exported in August-April 1957-58.

OILSEED SHIPMENTS THROUGH SUEZ CONTINUE LARGE

Northbound shipments of oilseeds through the Suez Canal in January were slightly larger than those in January 1958. The volume of soybeans was up sharply, but reduced shipments of copra, peanuts, cottonseed, and flaxseed almost offset this gain.

OILSEEDS: Northbound shipments, Suez Canal, January 1958 and 1959,
October-January 1957-58 and 1958-59

Oilseed	January		October-January	
	1958	1959	1957-58	1958-59

Flaxseed 2/.....	8.8	1.1	14.3	6.6
Other.....	20.9	15.4	76.0	66.1
Total.....	170.8	175.2	603.9	566.5

1/ 33.3 bushels per ton. 2/ 35.7 bushels per ton.

Suez Canal Authority, Monthly Bulletin (Cairo, Egypt).

The quantity of oilseeds moving northward in October-January of the current marketing year was around 5 percent below that a year earlier. Again, as in January, soybean movements were much larger, but were offset by reduced copra shipments alone; and smaller quantities of other oilseeds reduced the total volume.

U. S. RICE EXPORTS LARGEST SINCE OCTOBER

U. S. rice exports in March, at 1,464,000 bags (100 pounds) in terms of milled, were up sharply from recent months and were the largest since October 1958. French West Africa, West Germany, and Cuba were the principal destinations.

Rice exports in the first 8 months of the current marketing year (August-March) were 8,163,000 bags--300,000 bags less than in the same months of 1957-58. Greatly reduced exports to Pakistan and Korea decreased the volume to Asia. However, exports to other Asian countries, at 2,021,000 bags, were up sharply from the 580,000 bags in August-March 1957-58.

Exports to Europe in August-March were 18 percent of total rice exports, a remarkable gain compared with only 1 percent in the same months of 1957-58. These exports went mainly to West Germany, the United Kingdom, Belgium-Luxembourg, and the Netherlands. August-March exports to African countries came to 637,000 bags--more than double the 236,000 bags exported to those countries in August-March 1957-58.

**URUGUAY LOSES ONE-HALF OF
ITS 1959 SUNFLOWER SEED CROP**

Recent floods in Uruguay have reduced the 1959 sunflower seed crop by 50 percent, according to the most recent estimate.

Originally estimated at 102,000 short tons, the harvest is now expected to be around 50,000 tons (see Foreign Crops and Markets, April 20, 1959). However, with the oil from this crop, and carryover of 11,000 tons from 1958, Uruguay may be able to maintain present consumption rates without large imports of vegetable oil.

**COSTA RICA INCREASES AFRICAN
OIL PALM PLANTINGS**

Area planted to African oil palms in Costa Rica has been increased in 1959 to 11,836 acres. This is about 20 percent more than 1958 acreage of 9,835 acres. The new plantings will not start producing for 3 or 4 years. Output of both pericarp and kernel oil in 1959 is expected to decline substantially because of a marked drop in annual rainfall. Moreover, the oil extraction plant was closed about 4 weeks for overhaul.

**AFRICAN PALM OIL: Costa Rica, estimated supply and distribution,

1/ Preliminary. 2/ Negligible.

All Costa Rican palm oil is used domestically to make edible oil, margarine, shortening, and soap. The capacity of one of the major soap factories has been enlarged recently and therefore the expected increase in African palm oil production will find a ready domestic market. Duties on imported edible fats and oils probably will be increased to protect the local industry.

BRAZIL'S COTTON EXPORTS AND PRODUCTION DOWN

The downtrend in Brazilian cotton exports since 1953-54 continued during the first half of 1958-59. Preliminary estimates place August-January exports at only 54,000 bales (500 pounds gross). This was less than half the 129,000 bales exported in August-January 1957-58, and was the lowest level since the first half of the 1952-53 season.

The sharpest decline was in exports to Japan, which in recent years has been the largest market for Brazilian cotton. Quantities exported to principal destinations during August-January 1958-59, with comparable 1957-58 figures in parentheses, were: West Germany 15,000 bales (15,000); Japan 13,000 (67,000); Hong Kong 8,000 (7,000); United Kingdom 6,000 (6,000); Belgium 3,000 (0); Sweden 3,000 (2,000); and the Netherlands 2,000 (2,000).

Short supplies in recent years, along with high minimum export prices for the protection of the local textile industry, have held prices of Brazilian cotton above world levels, except under special bilateral trade agreements. Because of the smaller 1958-59 crop in North Brazil, Sao Paulo spot cotton prices advanced sharply during the first half of this season. By mid-January the price of Type 5 cotton had increased around 50 percent from the August 1958 price. Since the beginning of the South Brazilian harvest in February, prices have eased somewhat.

In late April, the government announced that exports of about 205,000 bales of cotton from the current South Brazilian crop and about 70,000 bales from next season's crop in North Brazil would be allowed at the free market rate of exchange. The free rate is currently around 135 cruzeiros per U. S. dollar.

Brazil's total 1958-59 cotton crop is estimated at 1,250,000 bales, down 7 percent from the 1957-58 crop of 1,350,000 bales. The severe drought cut 1958-59 production sharply in Northern Brazil, but this was partly offset by an increase in the South Brazilian crop.

Total cotton acreage in 1958-59 is estimated at 4,000,000 acres, compared with 3,700,000 in 1957-58. This 8-percent acreage expansion took place in South Brazil following an increase in the minimum prices guaranteed to producers for seed cotton--from the equivalent of 12.99 U.S. cents per pound to 15.10 cents. Acreage in Northern Brazil does not change much from year to year, since most of the cotton produced in that area is perennial type.

Reports indicate that the Brazilian textile industry is operating at a somewhat higher rate than last year. Consequently, cotton consumption this season may be slightly above the 1,050,000 bales used in 1957-58. Cotton stocks on March 1, 1959, were reported at about 270,000 bales, compared with the beginning stocks on August 1 of 600,000 bales.

U. S. COTTON IMPORTS UP IN MARCH

U. S. imports of cotton (for consumption) were equivalent to 3,360 bales of 500 pounds gross weight in March 1959. February imports amounted to 1,636 bales, and March 1958 imports were 4,047 bales.

Practically all the February imports consisted of short harsh Asiatic-type cotton, most of which came from Pakistan, with smaller quantities from India. This type of cotton has not been subject to quotas since January 1958.

Cotton imports during August-March 1958-59 totaled 128,000 bales, down slightly from 133,000 bales imported in the corresponding months a year earlier. Principal sources of the August-March imports, with comparable 1957-58 figures in parentheses, were: Egypt 58,000 bales (30,000); Mexico 33,000 (74,000); Peru 26,000 (14,000); Pakistan 5,000 (10,000); and India 3,000 (3,000). Small quantities were also imported from Brazil, Aden, and Sudan.

FREE WORLD GROWS MORE COTTON IN 1958-59; EXPORTS LESS

Cotton production in the 1958-59 season by principal Free World exporting countries is now estimated at 26.9 million bales (500 pounds gross). This is an increase of 1.0 million bales, or 4 percent, from last season.

The United States crop was larger this season because of record-high yields per acre while harvested acreage was down 13 percent from a year earlier and was the smallest since 1876. The 1958-59 crops were also considerably larger in Sudan, Mexico, and Egypt due to increased plantings and generally favorable growing conditions. Smaller production increases took place in British East Africa, Iran, Turkey, El Salvador, Peru, and Nicaragua. Other Free World countries showed declines from last season, largely because of adverse weather.

Thus far in the current season, cotton exports from the principal Free World exporting countries have declined by 1.5 million bales, or 20 percent, from shipments in the same months of 1957-58. Largest declines have been in exports from the United States, which are running only about half of what they were a year earlier. This reflects the price advantage of foreign cotton over most U.S. qualities. Exports from Syria, Brazil, and Iran were also smaller. Increased quantities were exported from 14 of the countries listed in the accompanying table--especially from India, Mexico, Egypt, Peru, Greece, and Pakistan.

Exports relate to the number of months shown opposite each country for the current season and for the same months last year.

FEWER FARMS IN WEST GERMANY

The number of farms with more than .5 hectare (1 hectare equals 2.471 acres) of agriculturally-used land in West Germany has declined from 1.91 million in 1949 to 1.74 million in 1958, according to Under Secretary Theodor Sonnemann of the German Ministry of Agriculture.

The decrease has been principally in part-time farms between .5 and 5 hectares in size, and is attributed largely to rising income from nonagricultural occupations. Purchase and leasing of much of this land has increased the average size of farms between 10 and 50 hectares. The Under Secretary pointed out that this change in farming structure, which would contribute more to raising farm income than many other measures, had been supported by the government only indirectly through land consolidation and settlement programs.

U. S. COTTON LINTERS IMPORTS DECLINE IN MARCH

U. S. imports of cotton linters, mostly felting qualities, were 15,000 bales (500 pounds gross) in March 1959. This was a decline of 12 percent from the 17,000 bales imported in February 1959, although 7 percent above imports of 14,000 bales in March 1958.

Linters imports in August-March 1958-59 totaled 121,000 bales, compared with 105,000 bales in the corresponding 1957-58 period. Principal sources of the August-March 1958-59 imports with comparable 1957-58 figures in parentheses, were: Mexico 98,000 bales (80,000); U.S.S.R. 10,000 (11,000); El Salvador 5,000 (2,000); Nicaragua 4,000 (1,000); and Guatemala 2,000 (1,000).

U. S. COTTON EXPORTS IN MARCH INCREASE FROM FEBRUARY

U. S. exports of cotton (all types) in March 1959 amounted to 295,000 bales of 500 pounds gross weight (284,000 running bales). This was an increase of 35 percent from February exports of 219,000 bales, although 41 percent below the 500,000 bales exported in March 1958.

Exports during August-March 1958-59 totaled 2,005,000 bales (1,931,000 running bales), against 3,938,000 bales in the corresponding 1957-58 period. Cotton exports in the full 1958-59 season (August-July) are not likely to reach 3,000,000 running bales. Last season's exports totaled 5,700,000 bales.

Sales under the 1958-59 export program of the Commodity Credit Corporation, for export between August 1, 1958, and July 31, 1959, totaled 2,257,943 running bales as of April 27, 1959. The average selling price, basis Mid-dling 1-inch cotton, average location, was 28.51 cents per pound for the April 27 sales, compared with 28.43 cents for the previous sales on April 13. In addition to the CCC sales, registrations of cotton for export under the "payment-in kind" program totaled 273,522 bales as of April 27.

COTTON PRICES STRONGER IN WORLD MARKETS

Prices for most growths and qualities of cotton have strengthened in world import markets recently, particularly since mid-April. The stronger prices reflect a broadening in demand following a pickup in consumption in some countries, and increasing confidence in the marketing situation. The recent announcement that the U. S. export price would not be reduced to the level of competing growths prior to August 1, was one factor contributing to the increased confidence.

By May 1, c.i.f. Liverpool prices of the most competitive foreign upland cottons, at 27.25 cents per pound, basis Middling 1 inch, were about 1 3/4 cents above mid-February levels. U. S. prices rose about $\frac{1}{2}$ cent during this period, and the price advantage of foreign cotton over American narrowed from about 3.8 cents per pound to around 2.6 cents.

Buying has been stimulated by indications that supplies of cotton in some foreign Free World producing countries may become short before the 1959-60 crops become available, and that there will be some reduction in foreign Free World production next season. Mills are now buying to cover their needs for the rest of this season. There is also some interest in rebuilding stocks, which are relatively low in major importing countries.

After dropping to long-time lows around the first of 1959, some qualities of Mexican and Nicaraguan cotton strengthened and steadied at about 1-cent a pound higher. Since February, prices for these growths have advanced an additional 1 to $1\frac{1}{2}$ cents a pound. Prices for Mexican new-crop cotton have gained nearly 1-cent a pound on the Liverpool market since offers first became available in February. Prices for foreign extra-long staple cotton remain at near-record lows, reflecting burdensome surpluses.

COTTON CONSUMPTION, IMPORTS, AND STOCKS DECLINE ABROAD

Thus far in 1958-59, cotton consumption and imports in principal foreign Free World importing countries have declined about 13 and 15 percent, respectively, from a year earlier. Stocks in these countries (India, Italy, and Spain excluded because their incoming crops will affect stock levels) are down 437,000 bales from August 1, 1958. This preliminary report is based primarily on data for the period August 1, 1958, to March 1 or April 1, 1959.

Compared with 1957-58, both consumption and imports have declined during 1958-59 in most importing countries, especially the United Kingdom, Japan, and West Germany. Consumption and imports increased slightly to moderately in Portugal and Hong Kong; in France imports were larger but consumption dropped. In the United Kingdom, West Germany, Canada, and Japan, there were major stock declines.

Cotton consumption has picked up recently in several countries, as consumer demand has improved and large stocks of finished goods have been reduced somewhat. Demand for raw cotton has also improved, as mills are buying to cover their needs for the rest of this season.

W O R L D T R A D E W E E K

President Eisenhower has proclaimed and urged the observance of the week beginning May 17 as WORLD TRADE WEEK.

He has called attention to the fact that international trade provides regular and direct communication between the world's people, thus stimulating mutual respect and understanding, which are the groundwork of peace.

The President has urged agricultural, industrial, labor, educational, and civic groups--as well as individual citizens--to observe WORLD TRADE WEEK with gatherings, discussions, exhibits, ceremonies, and other activities. This, he has stated, would tend to promote continuing awareness of the importance of world trade to the U. S. economy, and to this country's relations with other nations.
